

**The Original
Air Probe Sanitizer™**

24 hours,
7 days a week, 365 day a year
air purification system
designed to purify the air in
**your entire home, office,
school or hospital.**

Kills germs, bacteria,
viruses, mildew, mold spores.

Stop the spread of diseases
and sicknesses.

Eliminates chemical odors,
pet odors, tobacco odors
and cooking odors.

Stops mold and bacteria growth inside
your central air conditioning system.

Increasing the efficiency of your
central air conditioner **saving money**
on maintenance and utilities.

and **much more.**

We specialize in helping our customers from start to finish in designing the air purification system that will provide them with the comfort and protection they need.

The Air Probe Sanitizer is especially designed to be installed near the cooling coil in central heating and air conditioning system. It can be customized in various ways for any type or size of commercial or residential system application.

According to the Environmental Protection Agency, indoor air is two to ten times more hazardous than outside air. A recent study by the Lawrence Berkley National Lab stated that poor air quality inside commercial buildings results in \$58 billion in health costs and \$200 billion in productivity losses each year in the US.

How does it work?

In nature the UV component of sunlight is the main reason that microbes die in the outside air. Nearly all HVAC (central heating and air conditioning system) systems have the ideal conditions for the growth of mold, mildew, and other hazardous air pollutants. There are volatile organic compounds (VOC) in the air and also the very common problem of fine organic dust, germs, mold spores, pollen, animal dander, and other allergens.

The air in your home, office, school or hospital circulates anywhere from 250 to 400 times per day through the HVAC system. As air flows by the UV-C light, the resonance of the wavelength of the UV-C light produces the right amount of energy to break molecular bonds of the pathogens. The result is that the proteins and nucleic acid macromolecules found in bacteria, fungi, viruses, molds, and airborne cysts of protozoa are killed by instant ionization. 100% of the pathogens within inches of the light are destroyed. The Air Probe Sanitizer produces 2500 times more germicidal effect than the amount in the sunlight that reaches the earth's surface, using a carefully selected, optimum portion of the UV-C ultraviolet spectrum. After 24 hours, the air you breath will be so clean, you can actually feel and see the difference.

What are the Health Benefits?

- It kills germs, bacteria, viruses, mildew, mold spores such as stachybotrys and black mold, etc. as they circulate through the system and past the UV lamps.
- It helps stop the spread of diseases and sicknesses.
- It stops mold and bacteria growth inside your central air conditioning system. No more mildew and moldy odor from your air conditioner.
- It eliminates chemical odors, pet odors, tobacco odors and cooking odors making the air in your rooms smell fresh and clean while producing ZERO ozone.
- It destroys VOC's (volatile organic compounds).
- It generates safe and highly effective hydroxyl, the natural compound that scrubs pollution from the earth's atmosphere.
- It generates helpful negative ions, which are circulated out of your cooling and heating vents and into your living space by your central air conditioner's fan or blower.

What are the Economic benefits

- The Air Probe Sanitizer keeps the evaporation coil free of algae, slime, mold and mildew 24 hours a day.
- Cleaner coils improve performance and reduces operation cost.
- Most Air Probe Sanitizer installations pay for themselves in energy savings in less than 2 years.

Pricing

Commercial

Based on number of probes. The price for custom building a unit for your application is included in the price. Please contact us with the width and height of your cooling coils, and we will provide you with our quote.

Residential

Average cost per unit is \$750.00 installed. Please contact us for a firm quote.
